Documentation for Steps to Complete

0. Gathered reference material from official Bootstrap documentation

1. Created the github repository

2. Cloned from that repository using "git clone …"

3. For steps 4-7 I added, committed, and pushed local files to the remote

4. Add all html files (about, blog, contact, home), and create a custom template to reuse between pages (gitignored)

5. Add js files corresponding to blog and contact.

6. Updated blog.js to add functionality to "add blog post"

7. Updated the contact.js to validate entry

8. Styled the pages using bootstrap and custom css

9. Add "update and delete" functionality to articles
